Chuck Hickey

## Rumber

Patterson Drilling Co. started using rumber products in 2000 when we purchased several new oilfield low boys from Atoka Trailer mfg. We have since replaced some of the oak floors with rumber floors in other trailers in our fleet. We have about 40 trailers within our company with the rumber floors, and are very satisfied with the product. The oak was in need of repair after about six months of service, and total replacement about one year, but with the trailers we have the rumber floors have not had any repairs since we purchased them in 2000. I would recommend this product to everyone that is having the same problems we were with the oak.
